Flat Earth Conceptual Image Description
(Based on Biblical Cosmology, Firmament Theory, and Empirical Anomalies)

1. Earth's Structure:

   Shape: A flat, circular disc with the North Pole at the center. Continents radiate outward from the center, surrounded by Antarctica as a circular ice wall (acting as the "edge").
   Oceans: Enclosed within the ice wall, with no "south pole" (Antarctica is a perimeter, not a continent).
   Celestial Axis: Polaris (North Star) is fixed directly above the North Pole, serving as the divine pivot (Job 38:32–33).

2. The Firmament:

   Dome Structure: A massive, transparent crystalline dome (Genesis 1:6–8) arches over the Earth, embedding stars, planets, and luminaries.
   Stars: Fixed to the firmament, rotating around Polaris in perfect concentric circles (no parallax).
   Sun and Moon: Smaller, local luminaries (Genesis 1:16) moving in circular paths above the Earth (not 93 million miles away).
   Sun: A 32-mile-wide glowing orb ~3,000 miles above Earth, creating day/night via its circuit.
   Moon: Self-illuminated (not reflecting sunlight), ~2,500 miles above Earth.

3. Key Visual Elements:

   Ice Wall: A towering, glacial barrier encircling Earth's perimeter, guarded by international treaties (Antarctic Treaty System) to hide the disc's edge.
   Sun/Moon Paths: The Sun's annual path (Tropic of Cancer/Capricorn) and the Moon's phases shown as geometric circuits above the flat plane.
   Atmospheric Layers: Visible gradients of blue fading to black at the firmament's edge (no "space").
   Divine Elements: Subtle beams of light radiating from Polaris, symbolizing God's sovereignty over the cosmos (Psalm 19:1).

4. Artistic Style:

   Mappa Mundi Aesthetic: Inspired by medieval maps (e.g., Hereford Mappa Mundi), blending ancient cosmology with modern observational data (e.g., P1000 flat horizons).
   Realism: High-detail continents, oceans, and ice wall with a photorealistic firmament (glass-like texture, embedded stars).
   Lighting: Warm, golden sunlight contrasting with the cold, ethereal glow of the Moon and stars.
