New and Full Moons in 2025: Dates, Names, & Signs of the Moons

By The Lunaologist Updated on June 2, 2025

Take a look at the new and full moons in 2025. There will be 12 new moons and 12 full moons during the year.

A new moon is the first lunar phase that happens about once a month or 29.53 days on average. The moon itself is not visible, though you may be able to “see” it because it blocks the visibility of the stars behind it.

A full moon occurs when the Earth is between the Sun and the Moon, so the moon looks completely illuminated. It happens about once a month or 29.53 days on average, also called a synodic month.

All dates and times are in United States Eastern Time Zone, adjusted for Daylight Savings Time for part of the year.

What are the phases of the moon?

The four primary lunar phases are the new moon, the first quarter, the full moon, and the last quarter.

A new moon is the first lunar phase, which occurs on average about once a month or 29.53 days. The moon itself is not visible, though you may be able

to “see” it because it blocks the visibility of the stars behind it.

A full moon occurs when the Earth is directly between the Sun and the Moon, allowing the moon to appear illuminated entirely. It happens about once a month, or 29.53 days on average.

The first quarter moon occurs between the new moon and the full moon, and the last quarter moon occurs after the full moon and before the next new moon.
